

Chapter 7
Stoichiometry: Mass Relationships and Chemical Reactions
Learning Objectives

8.2.2020

To satisfy the minimum requirements for this course, you should be able to:

1. Be able to write balanced chemical equations including states
 - interpret balanced chemical reactions at the particulate and molar level
2. Understand the concept of stoichiometry and be able to:
 - calculate the amount (in moles or grams) of a particular substance produced or used in a chemical reaction
 - identify the limiting and excess reagents in a reaction mixture and determine the amount (in moles or grams) of excess reagent(s) remaining at the end of a reaction
 - calculate the theoretical yield, actual yield, and percent yield for a chemical reaction
3. Understand the concept of stoichiometry and
 - determine the percent composition by mass of its component elements given the molecular or empirical formula of a compound
 - determine the empirical formula for a compound given its percent composition by mass
 - determine the molecular formula of a compound given its empirical formula and molecular weight

N.B. Section 7.7 will not be covered
