

How to Access the DREN VPN

In order to access some .mil websites like the GRB Platform, you must use the DREN VPN and your CAC card rather than the SSL VPN that you normally use to access USNA intranet resources. To access the DREN VPN, make sure that your CAC is inserted into your card reader, and use the same AnyConnect client you use to access the SSL VPN. However, you will need to type (or select if you've entered it previously)

drenvpn.usna.navy.mil

in the dropdown on the AnyConnect Client

Then click the **Connect** button. You will be prompted to enter your PIN. After entering it, you will be connected to the DREN VPN.
