Write-up due 12/7 in class, presentations on 12/5 and 12/7.

In the group project, you are to choose a scenario involving defense of a critical infrastructure and a specific problem within that scenario. In your writeup, complete the following:

1. Describe the scenario. Remember to address what the scenario is and why the scenario is important. Describe what literature you have found that considers the scenario.

2. Describe your specific problem and how it fits into the general scenario.

3. Describe your formulation carefully: you must define all notation used and your formulation should be generally stated.

4. Describe your specific data and how you acquired it.

5. Describe the results of your computations.

6. Be sure to have a bibliography.

In your talk, you should address the same topics as the paper but keep in mind you must be much more succinct.
